

## FID-Accessoires

### Datasheet Gasstation

#### Description

The gasstation is fitted with all supplygases who are necessary for a FID measurement. Hydrogen as the fuel gas, nitrogen as zerogas and propane as the calibration gas are available in the one liter bottles who gives a very good handling in mobile measurement. The FID can be connected via teflon hoses and quick connectors.

#### Application

The main advantage of the gasstation is given in all cases of mobile measurement. The gasstation is made of aluminium and therefore it is very light for transporting every day to different places.

Quickconnectors at FID

#### Technical data Gasstation 1008

Height including handle: 500 mm  
 Length: 500 mm  
 Depth: 230 mm

Bottles:  
 Steelbottles 1 l- ownerbottles

- Fuelbottle : H<sub>2</sub> Quality 5.0
- Calibrationbottle : C<sub>3</sub>H<sub>8</sub> 80ppm
- Zerogasbottle : N<sub>2</sub> Quality 5.0

The connection from the FID to the gasstation is made by teflon hoses including quick connectors.
